- Designed and implemented a secure and user-friendly interface.
- Optimized the platform for high performance and scalability.
- Integrated payment gateways and other essential e-commerce functionalities.
- Conducted thorough testing to ensure a bug-free user experience.

Self Employed Freelancer   **2023 - present**

 Full stack developer and Graphic Designer

- Successfully completed various web development projects using technologies such as React, Next.js, and python, django, Mongodb, PostgreSQL, Docker, Amazon web services (AWS).
- Designed visually appealing and effective graphics for clients using Photoshop and Coreldraw.
- Demonstrated strong time management and communication skills while working independently on multiple projects simultaneously.

Projects

- **GadgetApp : React, TypeScript**
  I developed GadgetApp, an e-commerce / gadget showcase application using React, TypeScript, and MongoDB. This project enables users to browse, filter, and purchase gadgets, with real-time updates on stock and product availability. My responsibilities included designing the frontend UI/UX, implementing secure backend APIs for product data, user authentication, and order processing, and optimizing database queries and server performance. Demo

- **A-Movie-App : React, TypeScript**
  I developed A-Movie-App, a movie discovery and exploration platform built with React and TypeScript (and a backend API for data handling). This project empowers users to browse, search, and view details of movies in real time. My responsibilities included

designing an intuitive and responsive frontend UI/UX, integrating and implementing backend APIs for movie retrieval, search, and metadata, and optimizing data loading and rendering performance for a seamless user experience. Demo

- o **Coffee store website**

  A coffee website app to explore blends, cafés, brewing essentials, subscriptions, and place online orders. Features secure checkout, reviews, rewards, café locator, personalized suggestions, and mobile-friendly design. Demo

- o **Real Estate Backend App**

  Created a backend system for listing, filtering, and managing properties.

  Implemented secure login, CRUD functionality, and PostgreSQL integration. GitHub

- o **E-Commerce Backend App**

  Developed API endpoints for product listing, shopping cart, orders, and payments.

  Applied JWT authentication and role-based access control for users and admins. GitHub
